

Deployment Instructions for WordFinder

Deployment of the WordFinder application

This instruction describes how to install the WordFinder application and dictionary files on user computers when the user does not have the permission to install programs.

Refer to the **WordFinder Dictionary List 2018** section below for a list of dictionaries in our assortment and their associated dictionary files. Appendix A – Dictionaries no longer in our assortment, serves as a reference to old dictionaries previously sold by WordFinder, but no longer in our assortment.

How to get the installation software

Send a service request via the support form at <https://www.wordfinder.com/support> to get the installation software:

- ❖ the installation file for WordFinder Pro, **WFPro11.exe**.
- ❖ the installation files for the WordFinder dictionaries, ***.msi**.

System requirements

WordFinder Pro for Windows requires the following:

- ❖ Windows 7 or later.
- ❖ Hard disk with approximately 70 MB free space for the software, plus approximately 5–20 MB for each dictionary.

Recommended installation of WordFinder Pro

- 1) If an earlier version of WordFinder Pro is installed, the recommended first step is to remove it before installing WFPro11.exe.

NOTE: WFPro11.exe does not upgrade an existing installation of WordFinder Pro. The installation will be placed beside/in parallel with the existing installation of the program.

- 2) Use **WFPro11.exe** to install the main application.

Notes for WordFinder Pro for Windows

The WordFinder Pro installer **WFPro11.exe** is an executable InstallShield package with an embedded MSI installer.

Use the switches `/s /v"/qn"` for "silent" installation.

The `/s` option is required to run a silent installation. The switch `/v` passes the parameters `/qn` to Msiexec so that the MSI script will run silently as well.

When the user starts WordFinder for the first time, a file (WORDFIND.INI) is created with personal settings in the user profile.

Default location:

`C:\users\%username%\AppData\roaming\WordFinder Software\WordFinder`

Note!

It is important that each user has full rights to this WordFinder Software folder and subfolders.

Preconfigure WordFinder settings

All WordFinder Pro settings are stored in the **WORDFIND.INI** file. To change the default settings, simply create a **WORDFIND.INI** file with the parameters you want to preconfigure and distribute the file.

Syntax for WORDFIND.INI:

<code>[WORDFINDER]</code>	<i>File header</i>
<code>name¹=value¹</code>	<i>Names and values 1-n</i>
<code>name²=value²</code>	
<code>.</code>	
<code>.</code>	
<code>nameⁿ=valueⁿ</code>	

Change the default hotkey

Create a WORDFIND.INI file with these lines:

```
[WORDFINDER]
KEYS=value1+value2[+value3]
```

Value¹ and value² are mandatory, whereas value³ is optional. Value¹ must have the value either 56 (Alt) or 29 (Ctrl), the other key values can be chosen freely.

Key reference: [IBM AT-Style Keyboard](#)

Example:

```
[WORDFINDER]
KEYS=29+42+17
```

In the above example the hotkey is Ctrl+Shift+w.

Change the default dictionary

Create a WORDFIND.INI file with these lines:

```
[WORDFINDER]
CURRENTLOCALDICT=PATH-TO-DICTIONARIES\DICTIONARY-FILENAME.WFI
```

Example:

```
[WORDFINDER]
CURRENTLOCALDICT=C:\PROGRAM FILES (x86)\WFWIN\SVENWF.WFI
```

In the above example the default dictionary is set to WordFinders engelska ordbok, sv-en. The dictionary file names are listed in the **WordFinder Dictionary list 2018** section below.

Change the default interface language

Create a WORDFIND.INI file with these lines:

```
[WORDFINDER]
CurrentLanguageStr=Language Code
```

Supported interface languages:

Language	Language Code
Danish	DA_LANG
English	EN_LANG
Norwegian	NO_LANG
Swedish (default)	SV_LANG

Example:

[WORDFINDER]

CurrentLanguageStr=EN_LANG

In the above example the default interface language is set to English.

Distribute the preconfigured WORDFIND.INI file to the default location.

Installing the WordFinder dictionaries

The dictionary installers are MSI packages. Use the switch /qn for silent installation. Default installation folder is C:\Program Files (x86)\WFwin. Each dictionary is made up of two files, with the extensions WFD (data) and WFI (index) respectively.

Installing user dictionaries

In WordFinder Pro, users can create their own dictionaries. Each user dictionary is made up of two files, with the extensions WED (data) and WEI (index) respectively. User dictionaries are primarily used by the user who created them, but they can be distributed to many users.

User dictionaries shall be distributed much the same way as bought dictionaries, but since they are not packaged, they need to be distributed as files. WordFinder Pro will automatically launch dictionaries placed in any of the following two locations:

- C:\Program Files (x86)\WFwin
- C:\ProgramData\WFwin\Dicts

As a **best practice**, a distributed user dictionary shall be change protected by a password (a WordFinder Pro feature) by the publisher of the user dictionary. This is important to:

- 1) Prohibit everyone but the publisher to make changes to the dictionary content.
- 2) Avoid unnecessary error messages to be displayed if a user tries to make changes, since the dictionary may be placed in a directory where the user has limited permissions.
